13 journeys · exceptions · protective rules · append-only event trails

Contents

1 · Product & demo	What resQ 2.0 is, the four WhatsApp roles, and how to run the demo.
2 · Resources & links	Live app, repo, runbook, event-log export, tests.
3 · Journeys (evidence)	Real screenshots of every journey on the live app, with event trails.

J1 · Installation
J2 · Repair at home
J3 · Repair with a part (two visits)
J4 · Out-of-warranty repair
J5 · Repair by another brand
J6 · Walk-in repair at the store
J7 · Dead on arrival
J8 · House move
J9 · Maintenance & care plan
J10 · Complaint & escalation
J11 · Sale, opt-in & delivery
J12 · Technician roster
J13 · Payouts & disputes
EX · Exceptions & protective rules

Product & demo details

What it is. resQ 2.0 is Reliance Digital's service, rebuilt on WhatsApp. The AI agent does the routine work end to end; people act only on exceptions. Underneath is a registry: every serial bound to a household, with its warranty, service history and remaining life — the asset a pure e-commerce competitor cannot copy.

Four WhatsApp numbers (roles). 👤 Customer · 🏬 Service owner · 🔧 Field (technician / store associate / delivery / service bench) · 🧭 Area manager. One customer thread per household; one open question at a time.

AI-native. Free-text intent routing, replies in the customer's language (e.g. Hindi), a brand self-check and pre-diagnosis grounded in what the household owns, voice notes and error-code photos, and natural grounded replies — all with the OpenAI model; deterministic fallbacks when a key is absent.

Guardrails. An append-only event log (a correction is a new event), a job state machine, and eight protective rules enforced in code — never by the model.

How to read this document. Each journey page is a real screenshot of the live deployed app (the four phones on one screen), plus any other participant's thread, and the append-only event trail that journey produced.

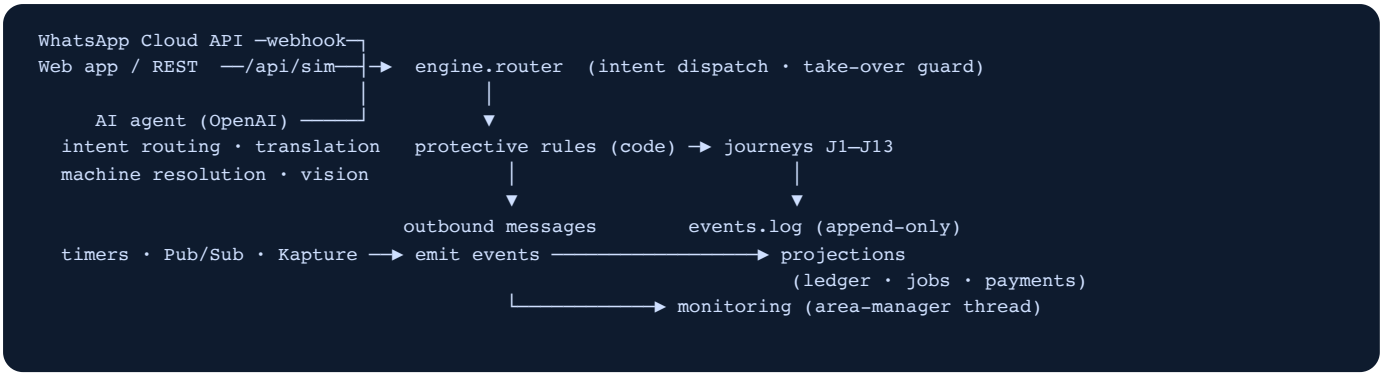

What the demo proves (judging)

Works end to end (25)	J1–J13 — every journey runs from booking to close.
Customer experience (20)	AI triage, language mirroring, UPI QR, grounding in owned machines.
Human touches (15)	J10 talk-to-a-person, resQ-desk take-over, the action register.
Exceptions (15)	EX + handlers: wrong serial, decline→backup→escalate, site not ready, payment fails, DOA rejected.
Protective rules (15)	Serial match, proof via capture link, rate-card prices, no cash, handover code, payout guard.
Monitoring (10)	Area overview (pie, exceptions, live log), status on request, 8am/6pm digest.

Run the demo: open the live app, click **Reset demo**, then follow the one-job loop — customer books → owner assigns → technician scans serial + finishes → customer confirms. Full click-through in the runbook.

Architecture

Event-sourced core. Every change is an immutable event; read models (ledger, jobs, payments) are projections. One channel-agnostic engine serves WhatsApp, the web app and the API. Protective rules and money actions are enforced in code; the AI agent does intent + language + machine resolution.

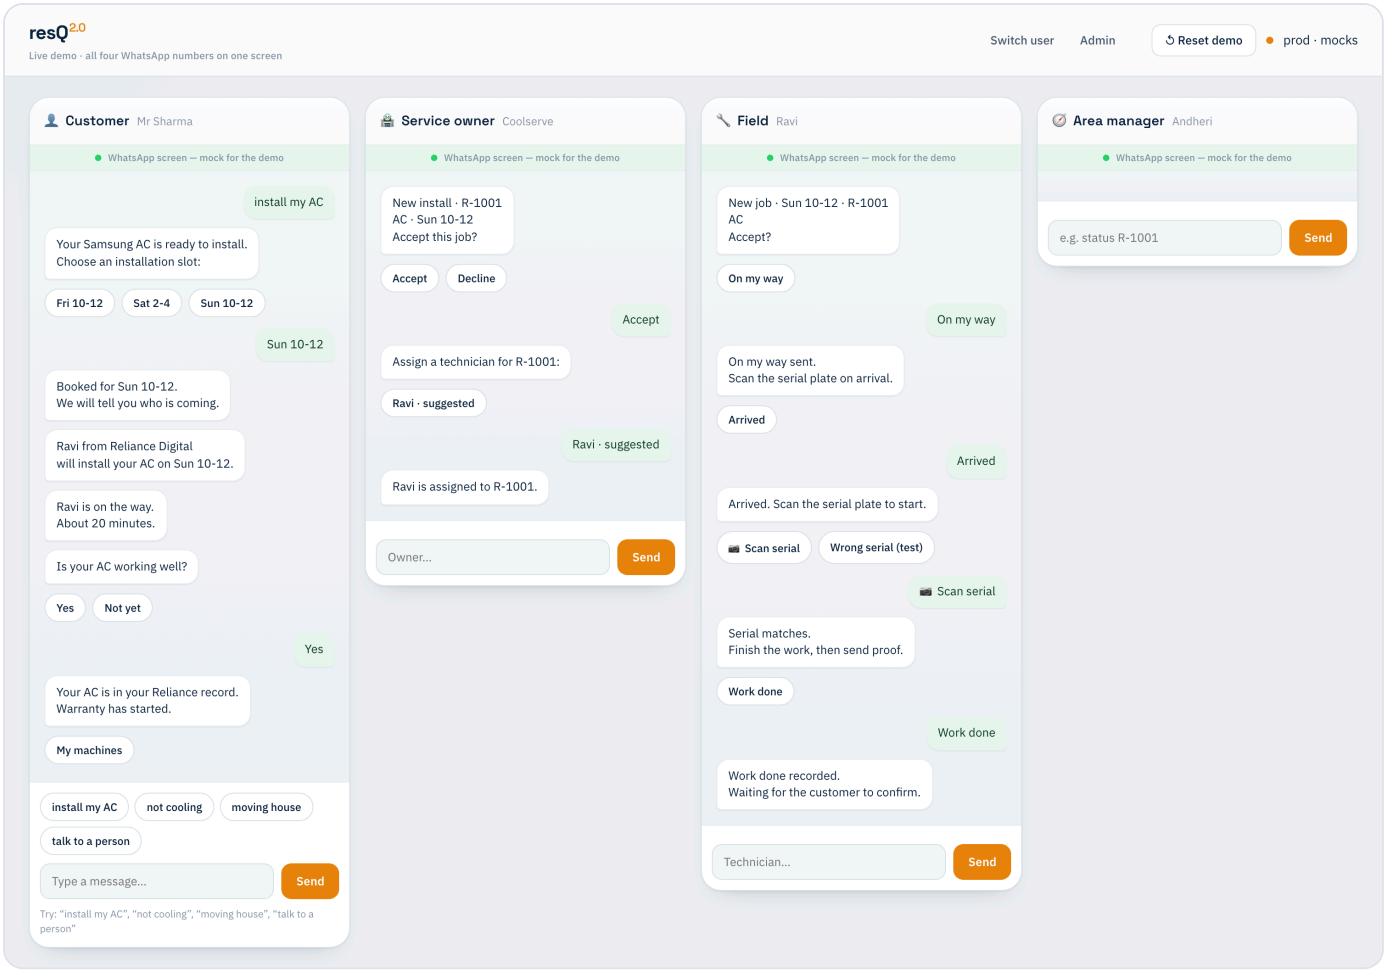

app/events	Append-only event log + projections (the source of truth).
app/models	Machine-first ledger & records (Machine, Job, Visit, Task, Request…).
app/engine	Per-message context + intent router / dispatcher (surface-agnostic).
app/agent	LLM layer + resolve (machine), diagnose, language, vision, voice, orchestrator.
app/journeys	J1–J13 + shared steps (assign/visit) + exception handlers.
app/rules	The 8 protective rules — hard gates in code.
app/integrations	Kapture REST (live), Pub/Sub consumer, UPI payments (mock-swappable).
app/monitoring	Alerts (≤1/10min/cause), status, take-over, digests.
app/timers	APScheduler sweeps (cooling, owner-no-reply, waiting-confirm, brand-ticket…).
app/channels	WhatsApp Cloud API (webhook + send) and the in-process simulator.
app/api	REST the web clients use (sim, ledger, inbox, config, export, qr…).
clients/web	Login, customer app, owner/field/area apps, admin console, 4-phone demo.

Demo runbook	https://github.com/hansrajdeghun-ai/resq2.0/blob/main/DEMO.md
This evidence PDF	https://github.com/hansrajdeghun-ai/resq2.0/blob/main/resQ_2.0_Submission.pdf
Event-log export (live)	https://resq-2-jrec.onrender.com/api/export
Run all 13 journeys	`python -m scripts.run_all_journeys`
Tests	`python -m pytest -q` — 55 passing

J1 · Installation

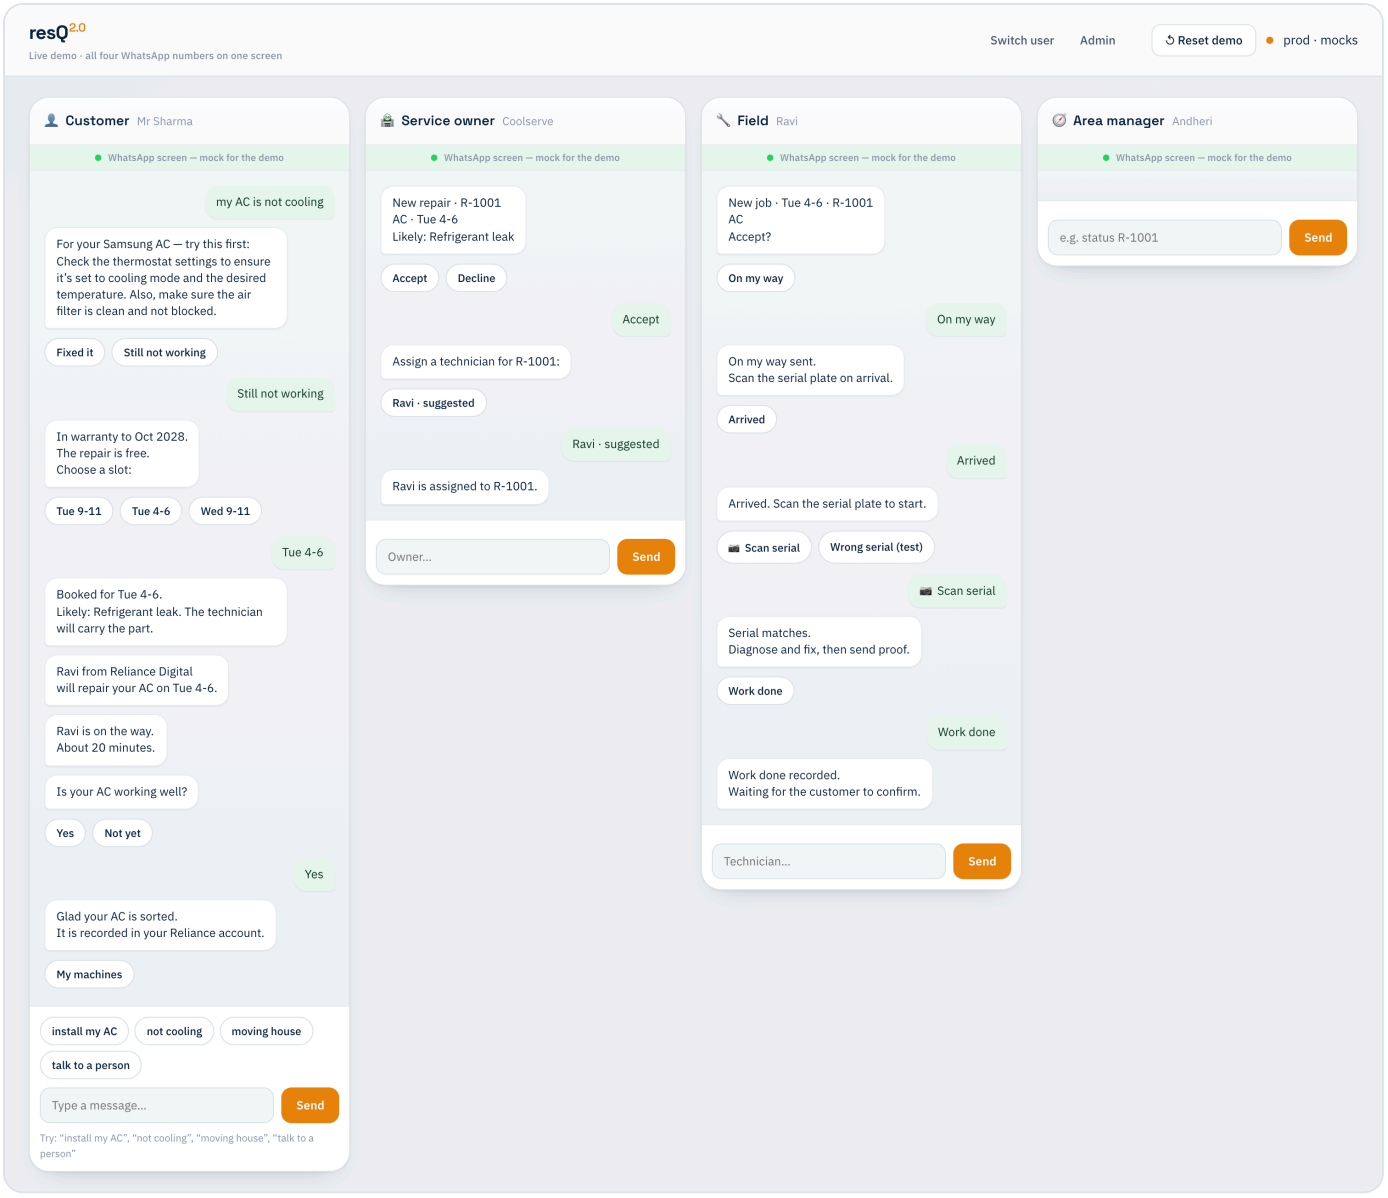

Booking, assignment and the visit — one job across the four numbers.

Append-only event trail: `Payable · Claimed · CustomerConfirmed · WorkDone · SerialVerified · Arrived · EnRoute · TechnicianAssigned · PartnerAssigned · PartnerOffered · Promised · InstallRequested`

J2 · Repair at home

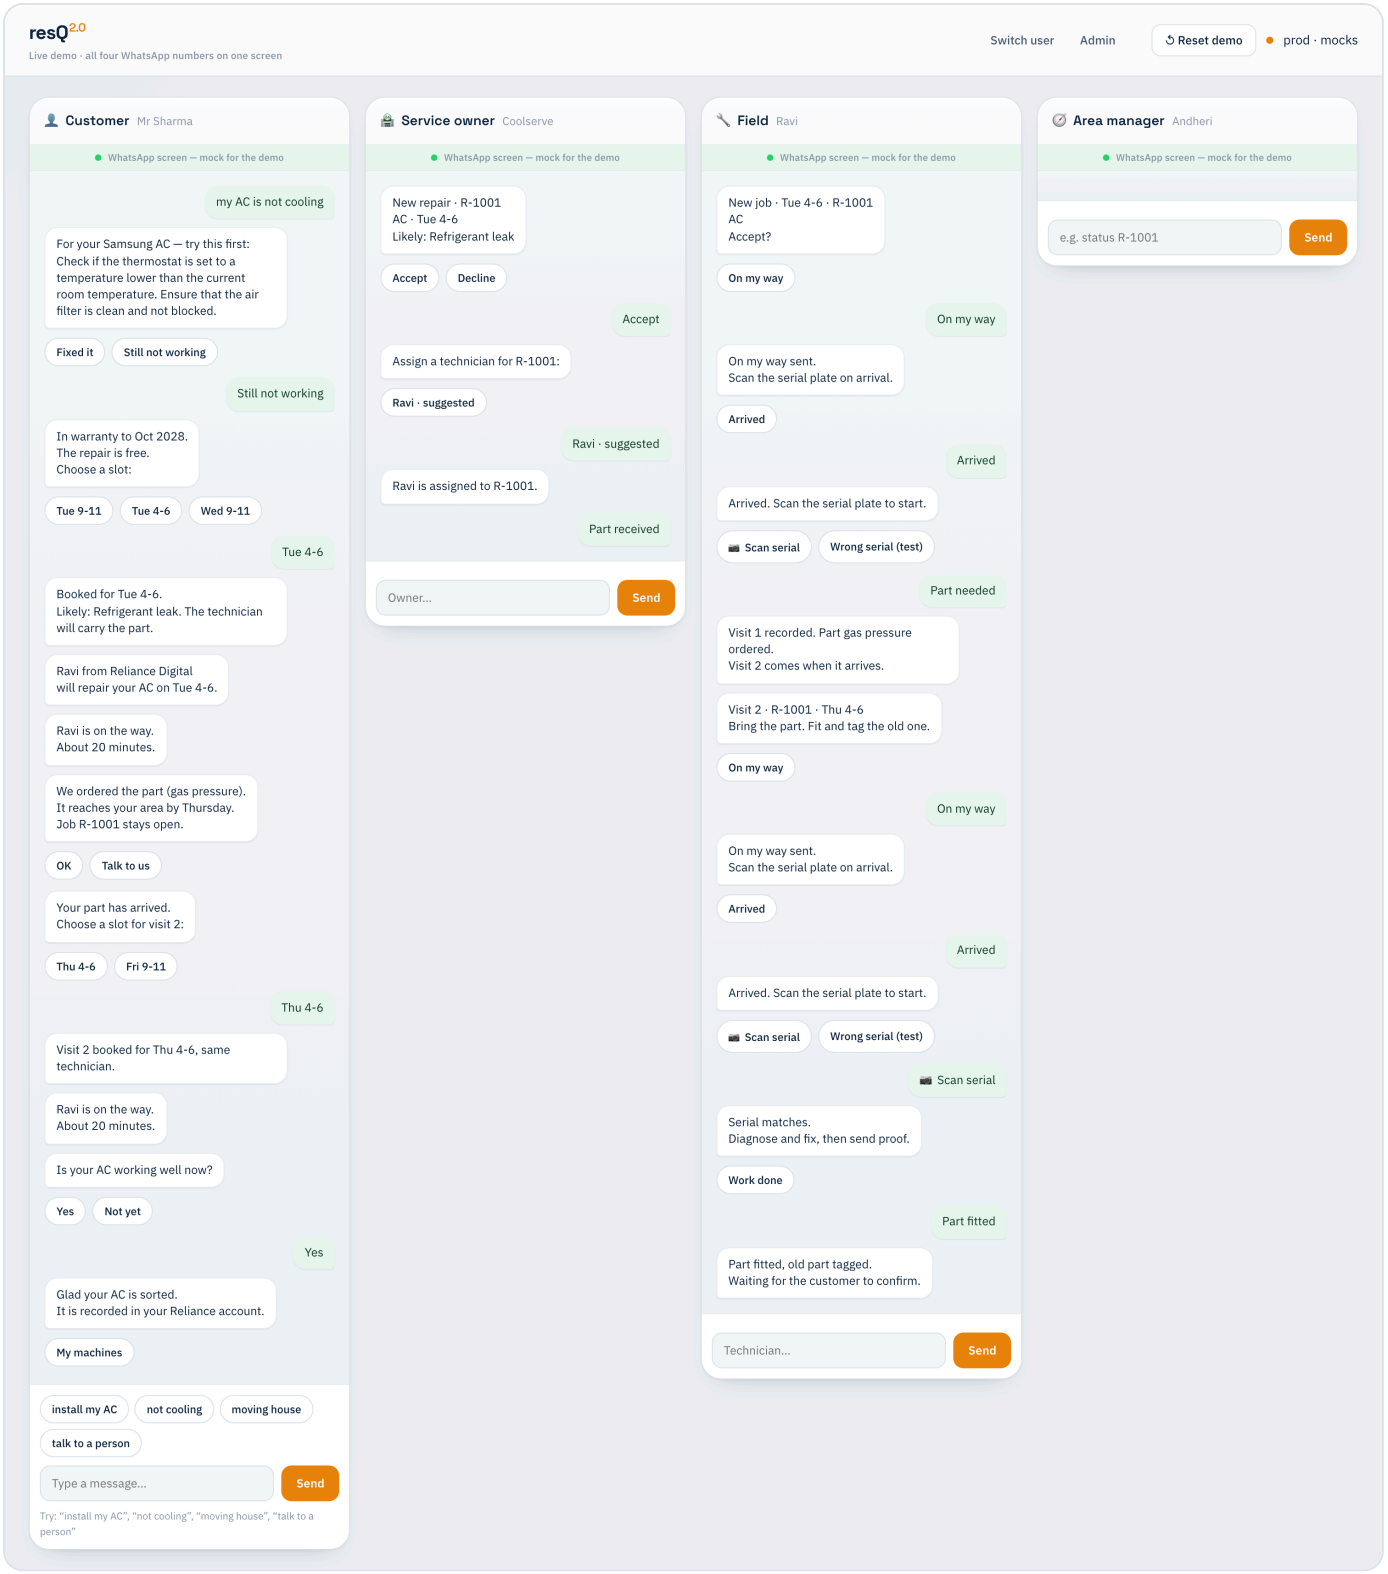

Brand self-check, warranty from the ledger, book a technician with the part.

Append-only event trail: `Payable · Claimed · CustomerConfirmed · WorkDone · SerialVerified · Arrived · EnRoute · TechnicianAssigned · PartnerAssigned · PartnerOffered · Promised · PreDiagnosed · RepairRequested · WarrantyChecked · SelfCheckSent · FaultReported`

J3 · Repair with a part (two visits)

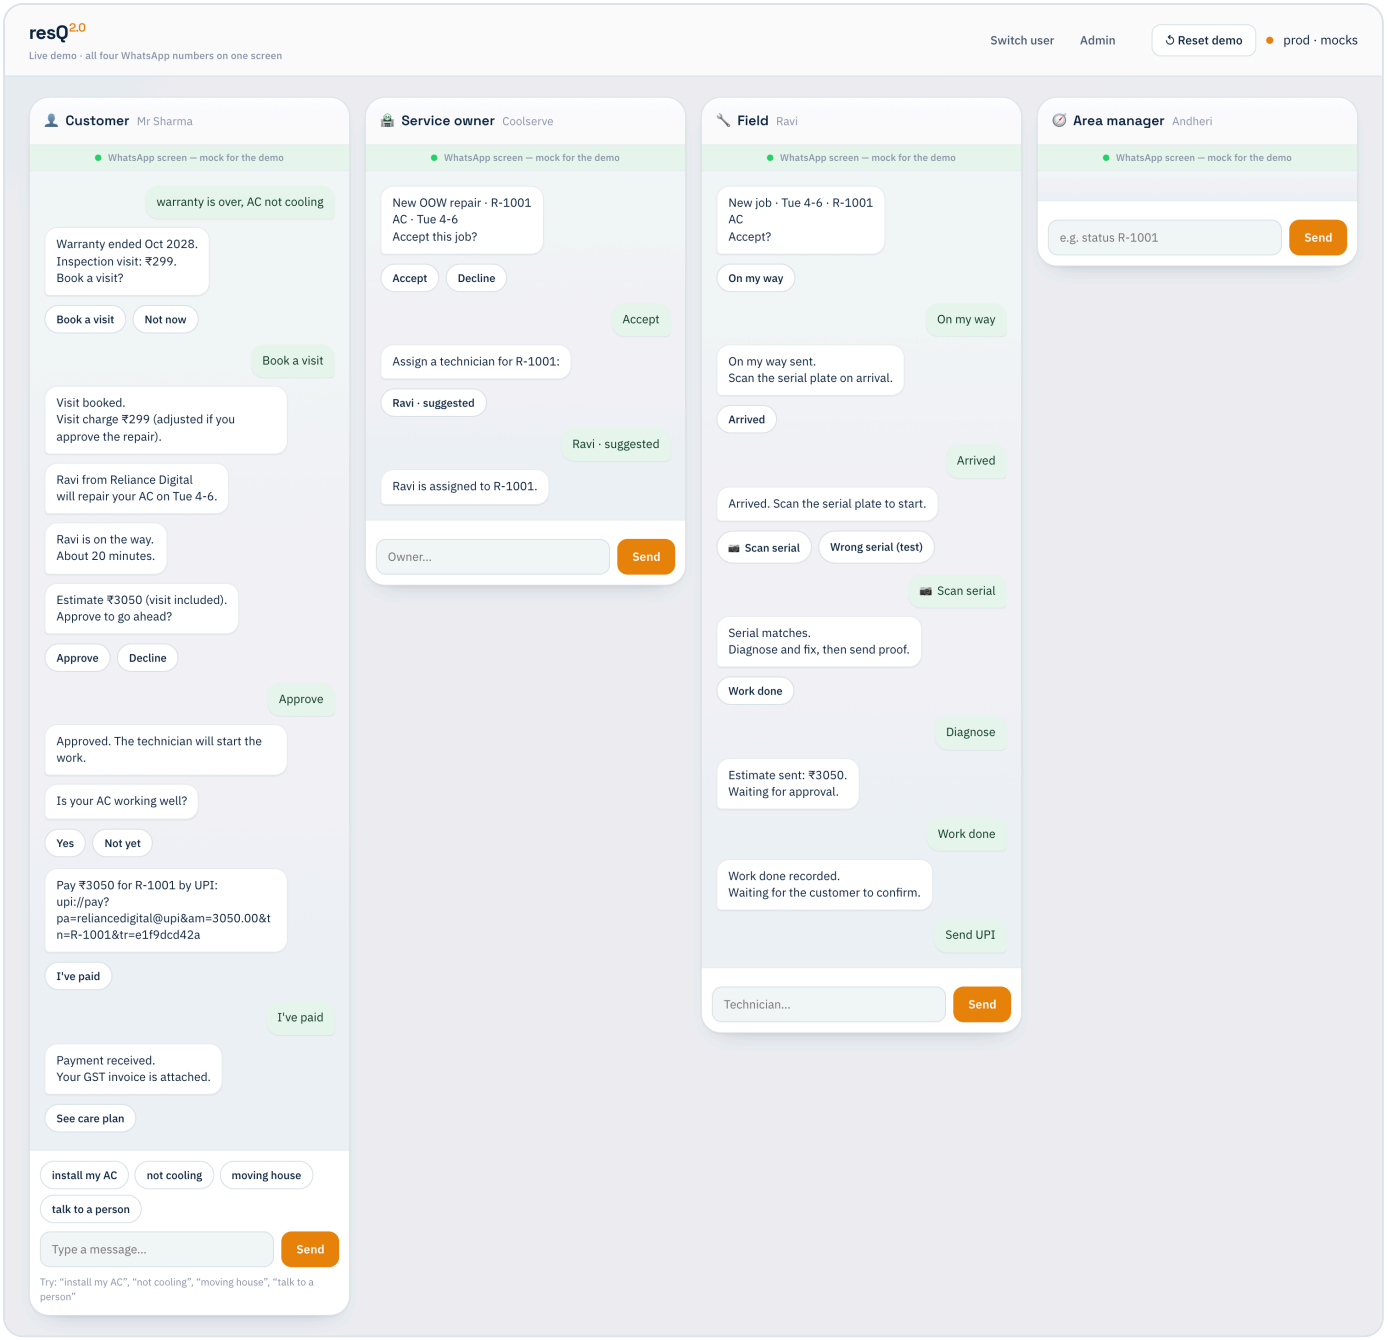

Part not in the bag; one job stays open, visit 2 when it arrives.

Append-only event trail: Payable · Claimed · CustomerConfirmed · ReturnOpened · WorkDone · PartUsed · SerialVerified · Arrived · EnRoute · TechnicianAssigned · Promised · VisitOpened · PartReceived · PartDispatched · PartReserved · PartNeeded · Diagnosed · Arrived · EnRoute · TechnicianAssigned · PartnerAssigned · PartnerOffered · Promised · PreDiagnosed · RepairRequested · WarrantyChecked · SelfCheckSent · FaultReported

J4 · Out-of-warranty repair

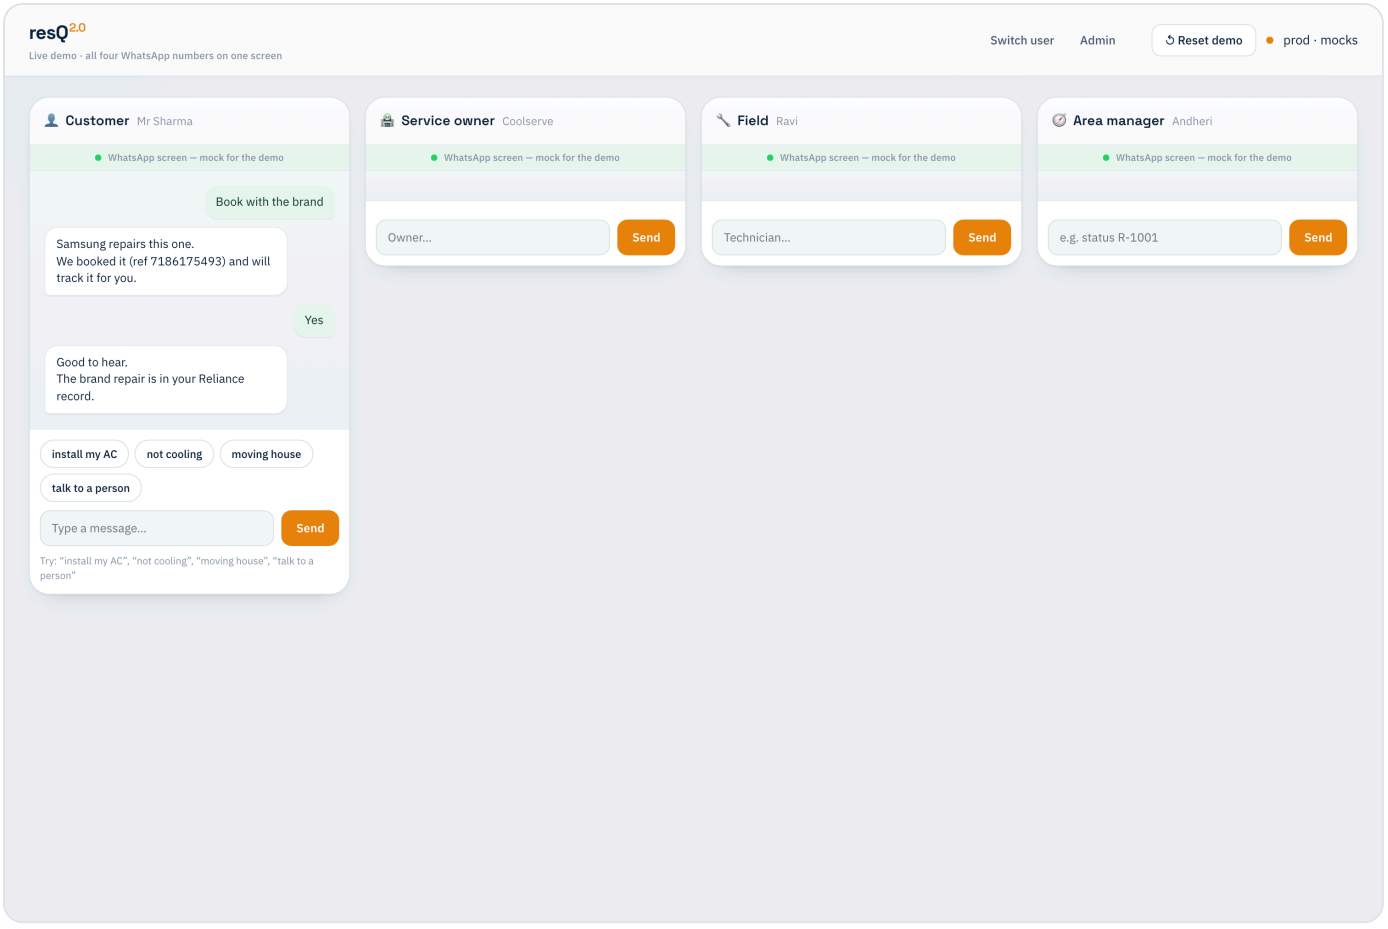

Visit charge before booking, estimate before work, pay by UPI.

Append-only event trail: `InvoiceSent · PaymentReceived · WorkDone · EstimateApproved · EstimateSent · Diagnosed · SerialVerified · Arrived · EnRoute · TechnicianAssigned · PartnerAssigned · PartnerOffered · Promised · VisitFeeAccepted · WarrantyChecked · FaultReported`

J5 · Repair by another brand

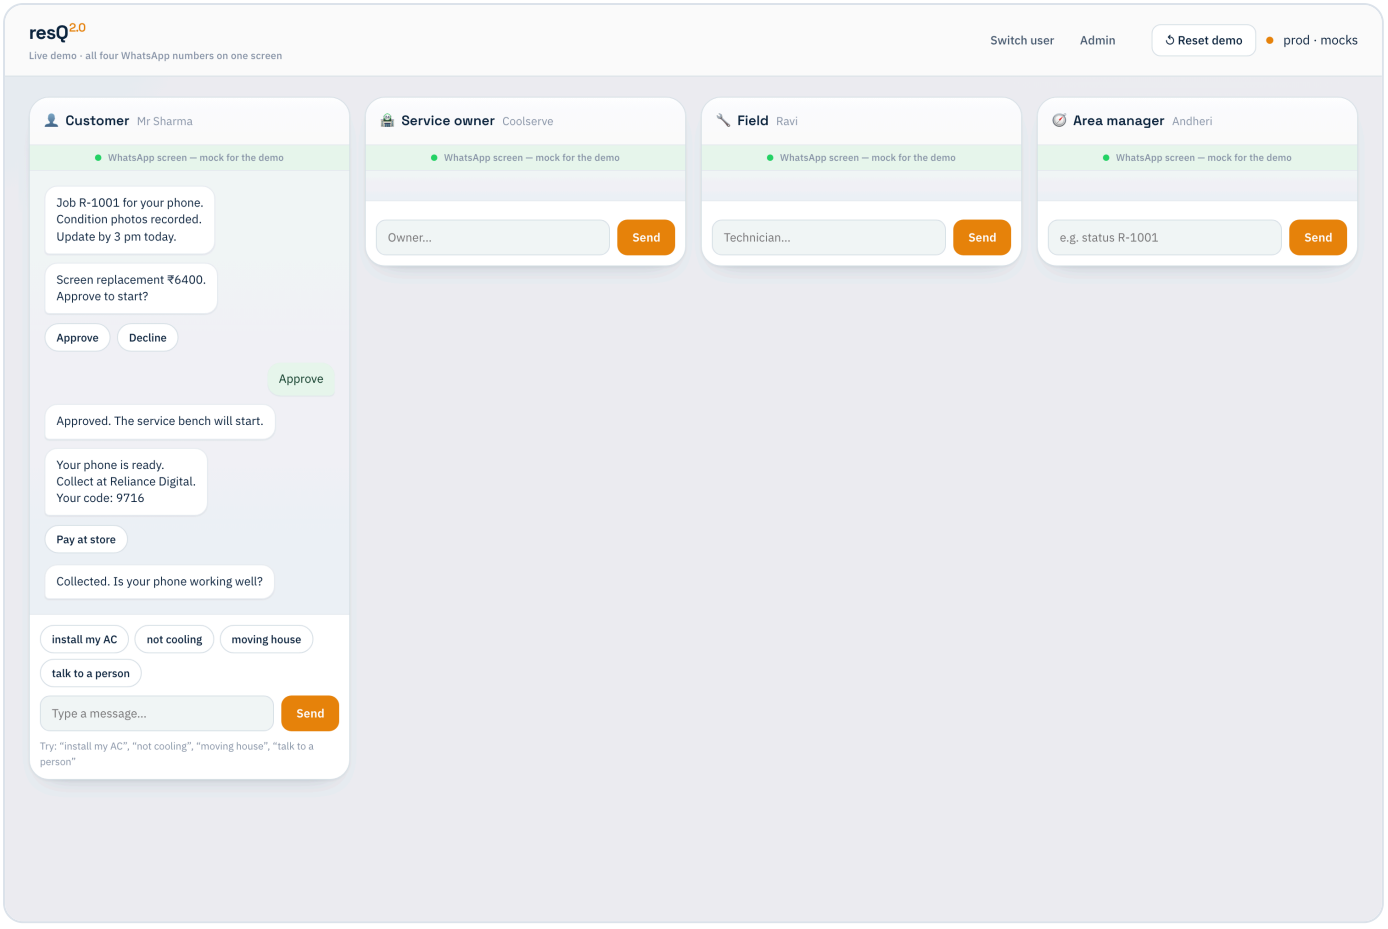

The brand repairs it; the agent registers and tracks it in the thread.

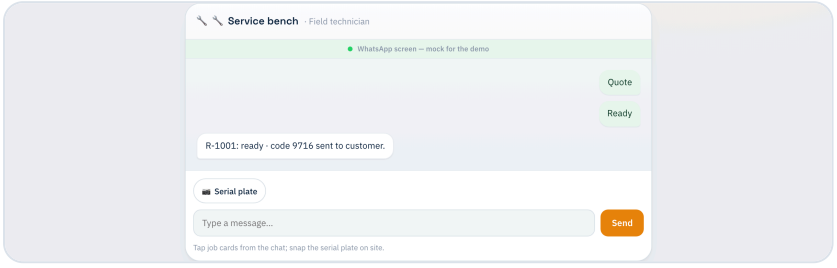

Append-only event trail: `Closed · CustomerConfirmed · BrandVisitPromised · BrandTicketOpened · AuthorityChecked`

J6 · Walk-in repair at the store

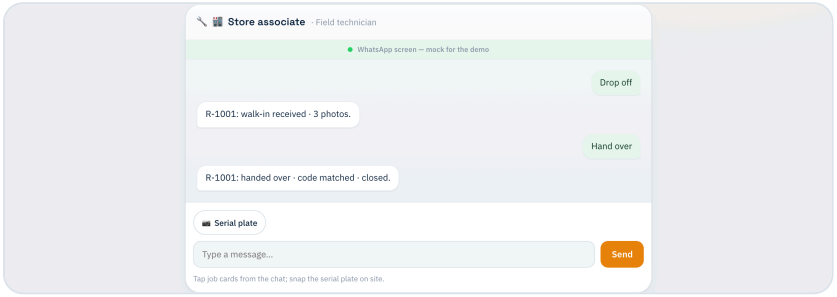

Drop off, track on WhatsApp, collect with a one-time code.

🔧 Service bench

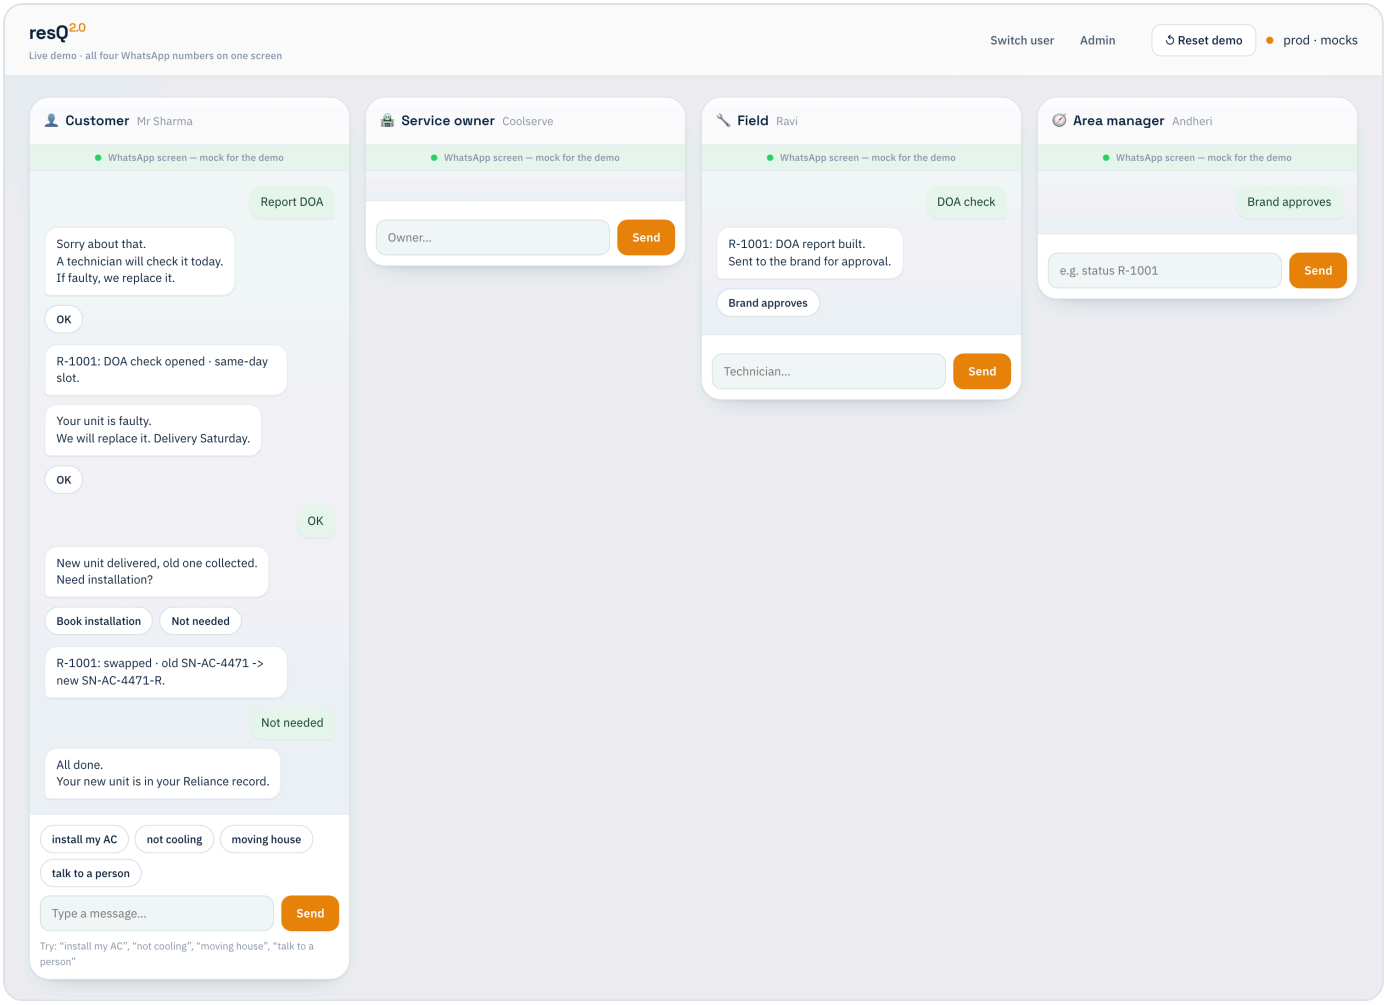

🏬 Store associate

Append-only event trail: `Closed · CustomerConfirmed · HandedOver · PaymentReceived · ReadyForPickup · WorkDone · EstimateApproved · EstimateSent · Diagnosed · ConditionRecorded · WalkInReceived`

J7 · Dead on arrival

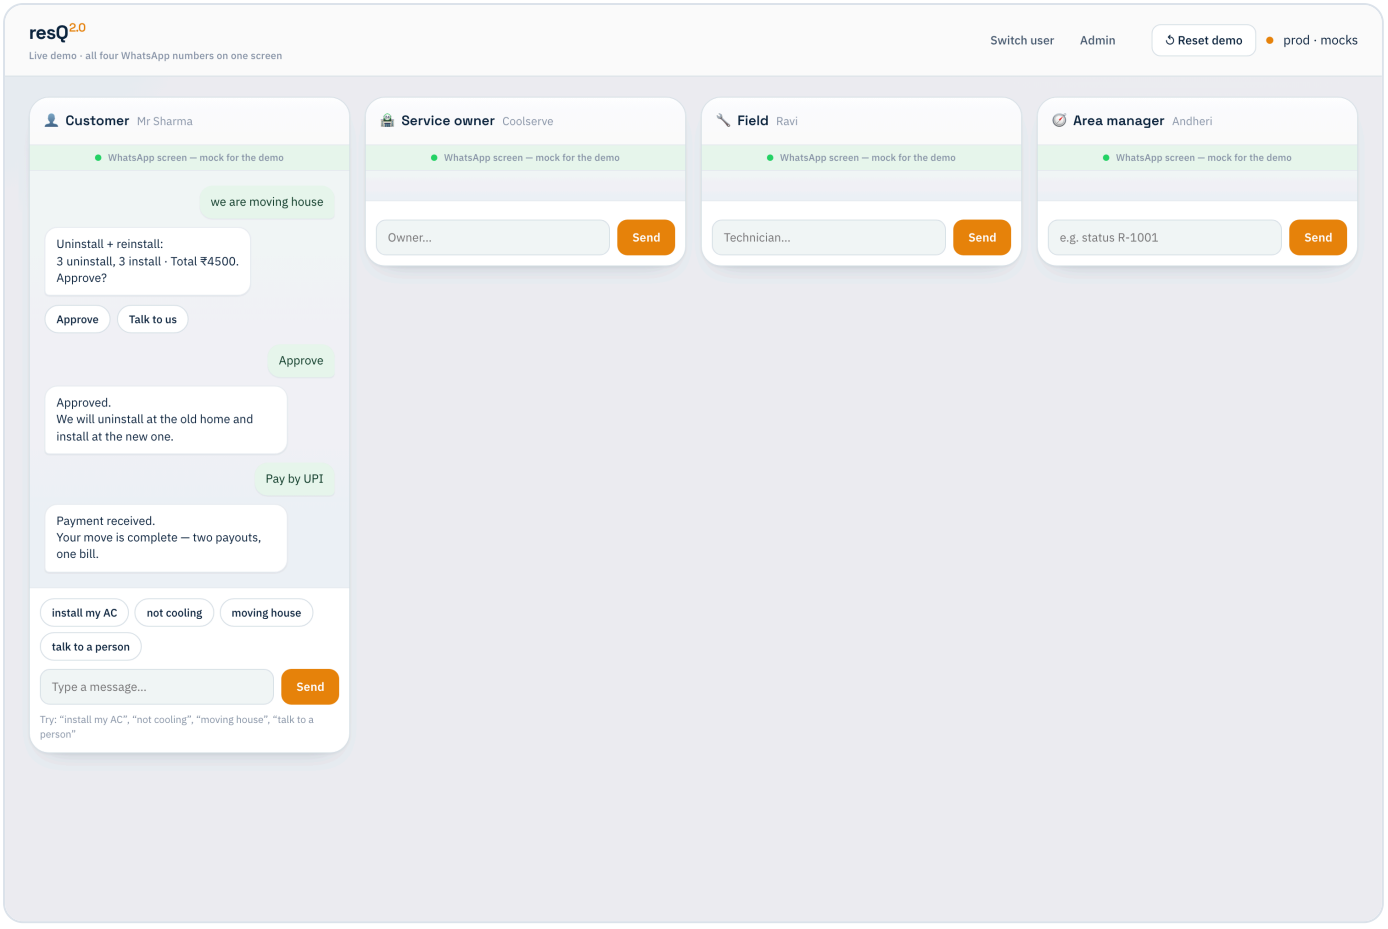

Technician checks, the brand approves, the store swaps the unit.

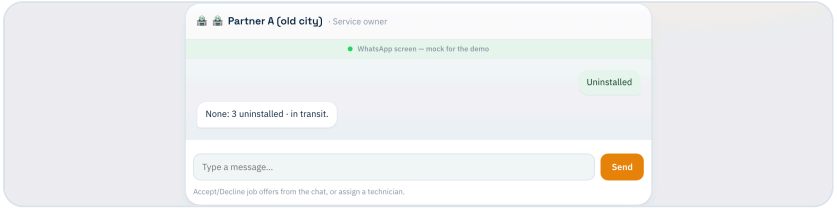

Append-only event trail: `Closed · Replaced · Collected · SerialBound · Delivered · ReplacementReserved · DOAApproved · DOAReported · DOACheckOpened · FaultReported`

J8 · House move

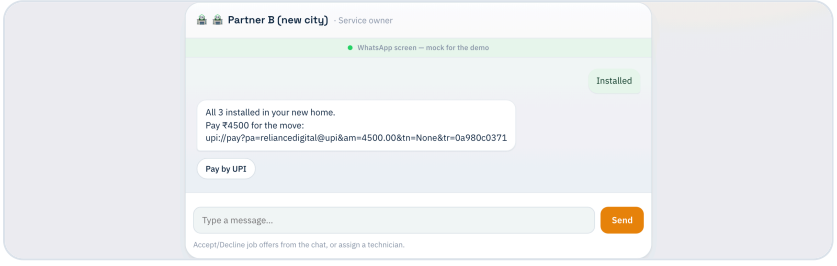

One request, uninstall + reinstall by two partners, one bill.

Partner A (old city)

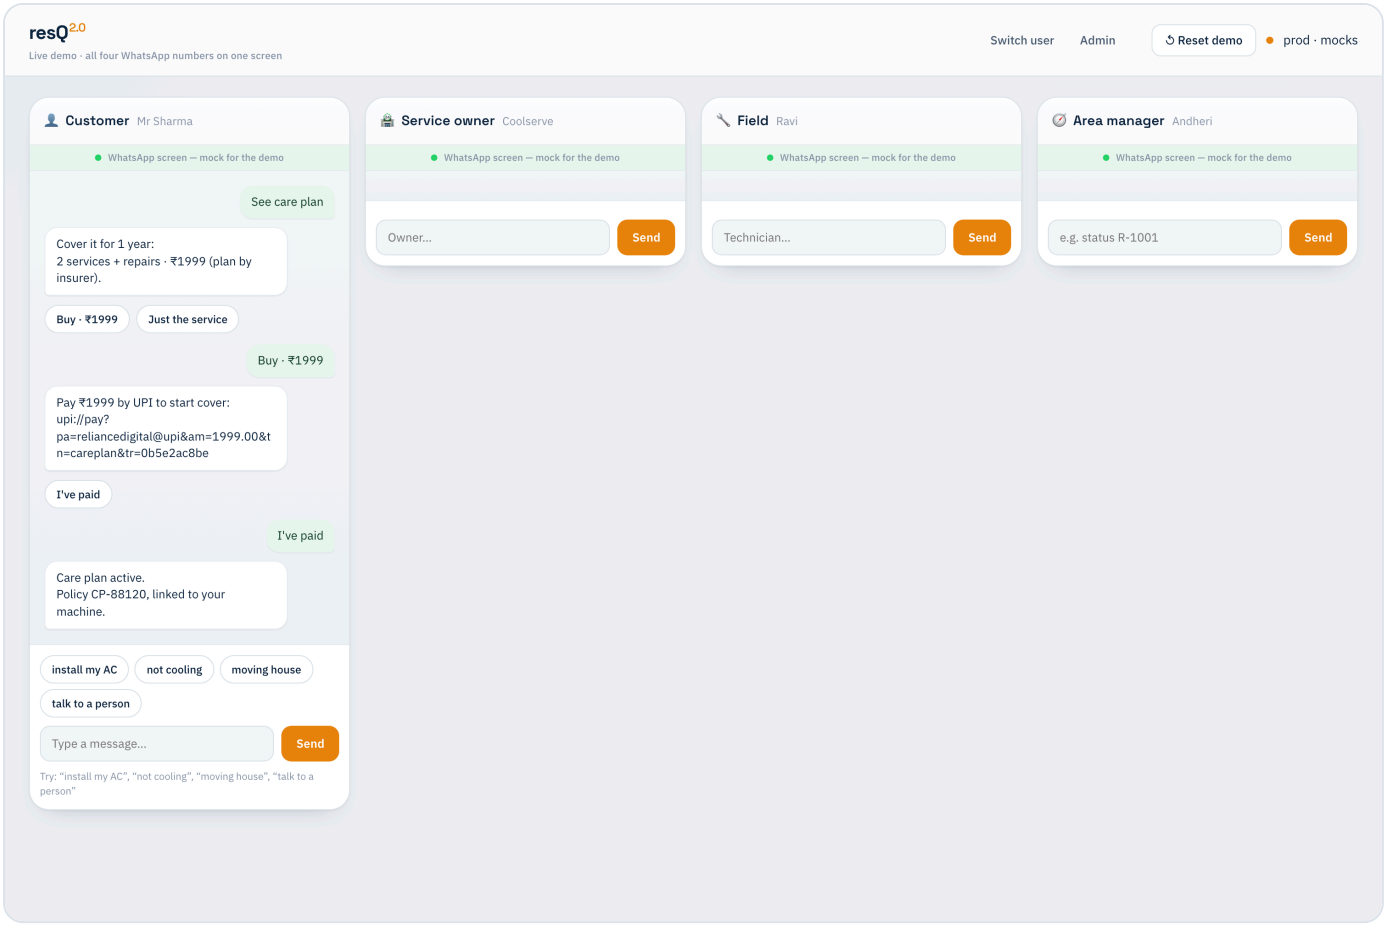

Partner B (new city)

Append-only event trail: RequestClosed · PaymentReceived · CustomerConfirmed · Installed · AddressMoved · Uninstalled · QuoteApproved · JobsOpened · RequestOpened

J9 · Maintenance & care plan

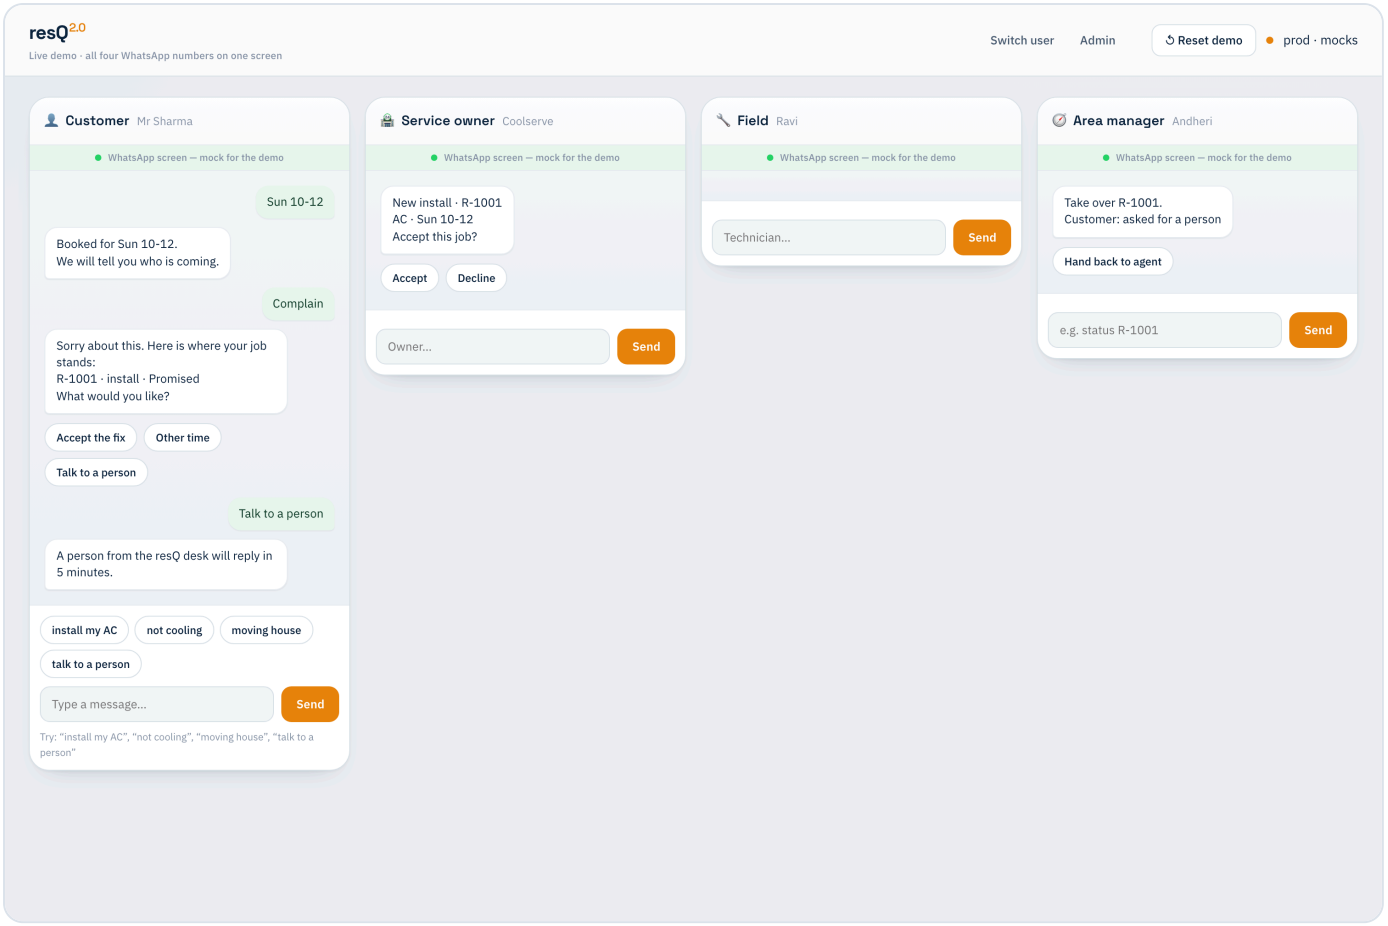

Reminder, a care plan from an insurer, bound to the serial.

Append-only event trail: `PolicyBound · PlanBought · PlanQuoted`

J10 · Complaint & escalation

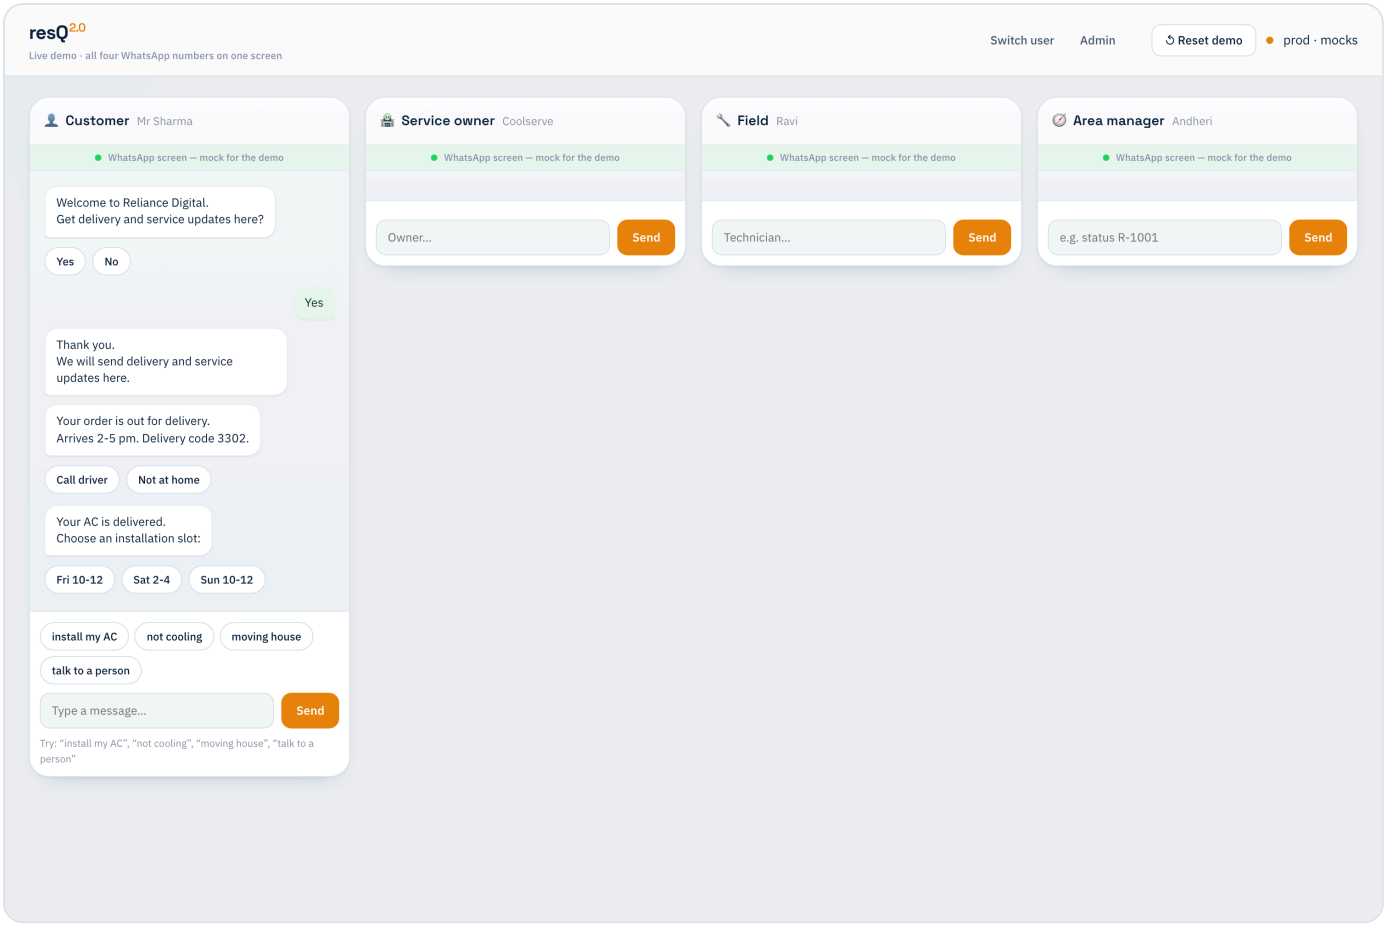

The agent replies with facts; a person takes over on request.

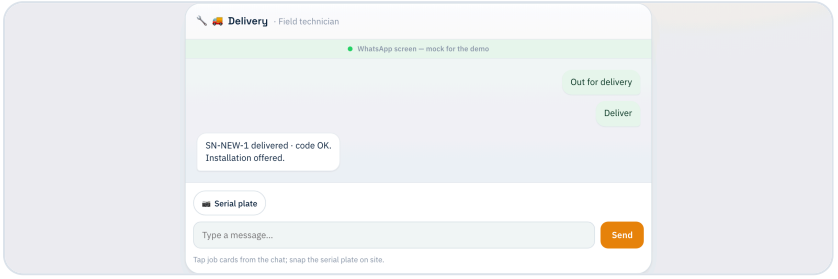

Append-only event trail: `TakenOver · HandedToPerson · AlertSent · FixProposed · ComplaintRaised · PartnerOffered · Promised · InstallRequested`

J11 · Sale, opt-in & delivery

Opt-in, out-for-delivery, serial scanned, installation opened.

🚚 Delivery

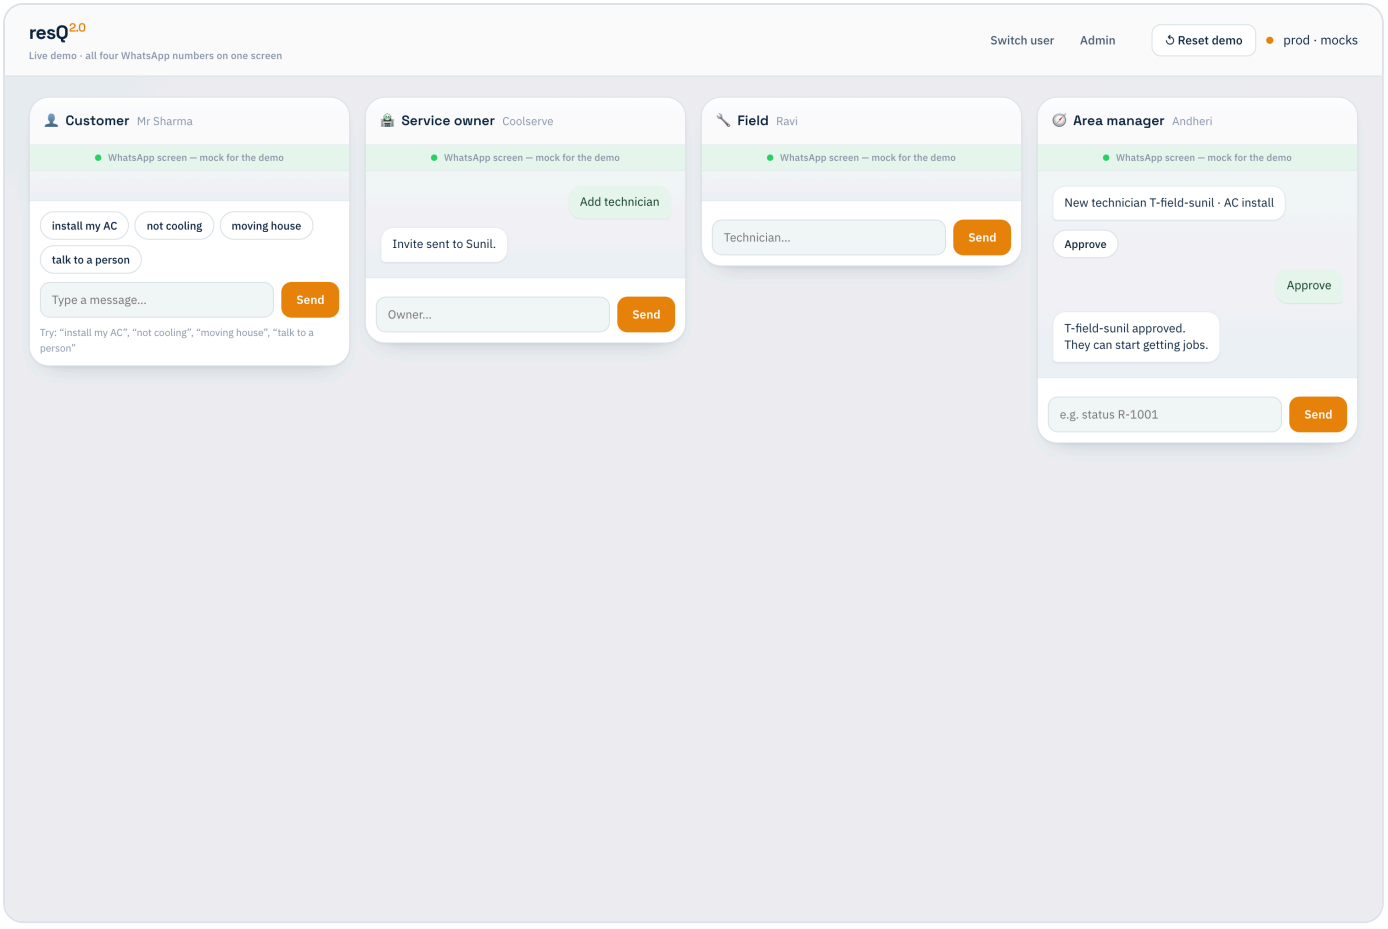

🏬 Store associate

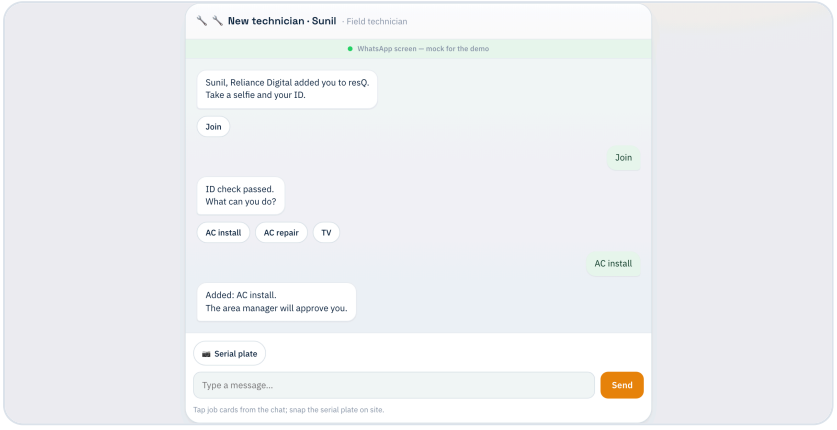

Append-only event trail: `Delivered · SerialBound · OutForDelivery · OptedIn · Sold`

J12 · Technician roster

The owner adds a technician; the area manager approves.

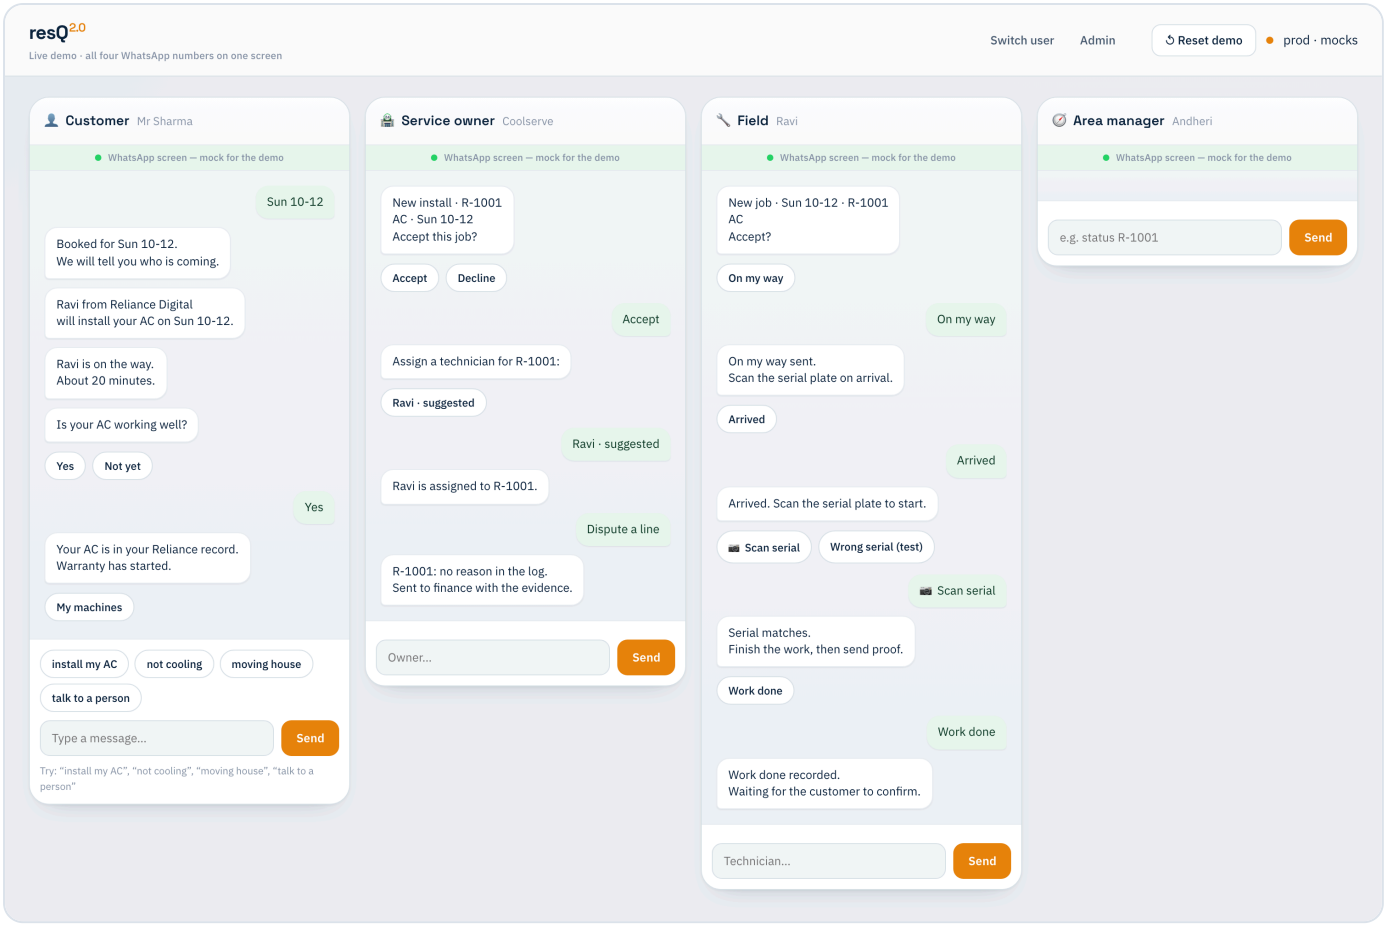

🔧 New technician · Sunil

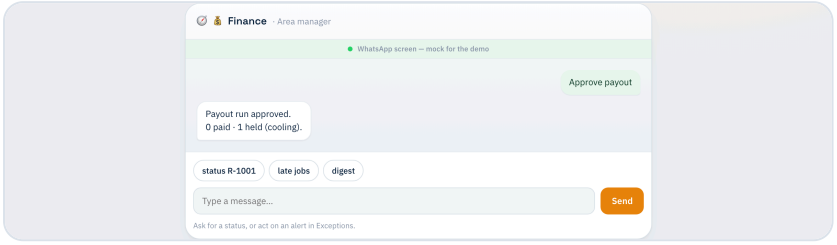

Append-only event trail: `TechnicianApproved · SkillAdded · IDChecked · TechnicianJoined · TechnicianInvited`

J13 · Payouts & disputes

Payable after confirm + cooling; a person approves the run.

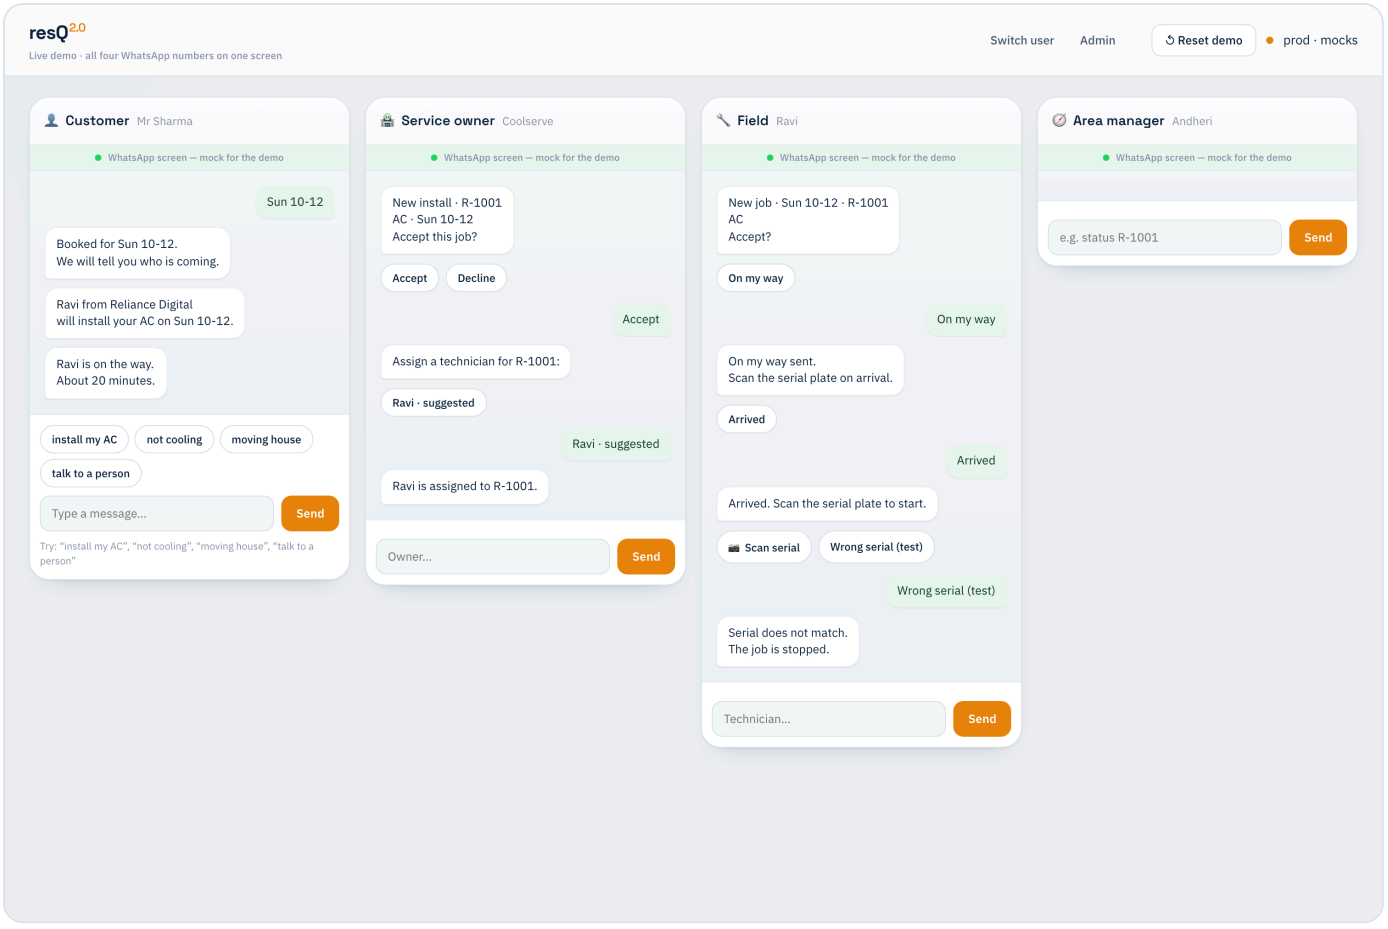

💰 Finance

Append-only event trail: `DisputeToFinance · DisputeRaised · Held · Payable · Claimed · CustomerConfirmed · WorkDone · SerialVerified · Arrived · EnRoute · TechnicianAssigned · PartnerAssigned · PartnerOffered · Promised · InstallRequested`

EX · Exceptions & protective rules

A wrong serial at the door stops the job (protective rule, jury attack).

Append-only event trail: SerialMismatch · Arrived · EnRoute · TechnicianAssigned · PartnerAssigned · PartnerOffered · Promised · InstallRequested
