RELIANCE DIGITAL · AI-NATIVE SERVICE

resQ 2.0

The appliance-service agent that lives on WhatsApp.

- One AI agent · four WhatsApp numbers · thirteen journeys
- Event-sourced core · machine-first ledger · 8 protective rules

THE PROBLEM

Service today leaks trust at every step

- Customers chase updates over calls — no single thread, no status.
- Jobs bounce between owner, technician and desk with no system of record.
- Cash paid before work is verified; disputes have no audit trail.
- Field edge-cases (wrong serial, no-show, damage) fall through the cracks.

THE SOLUTION

One agent on the channel people already use

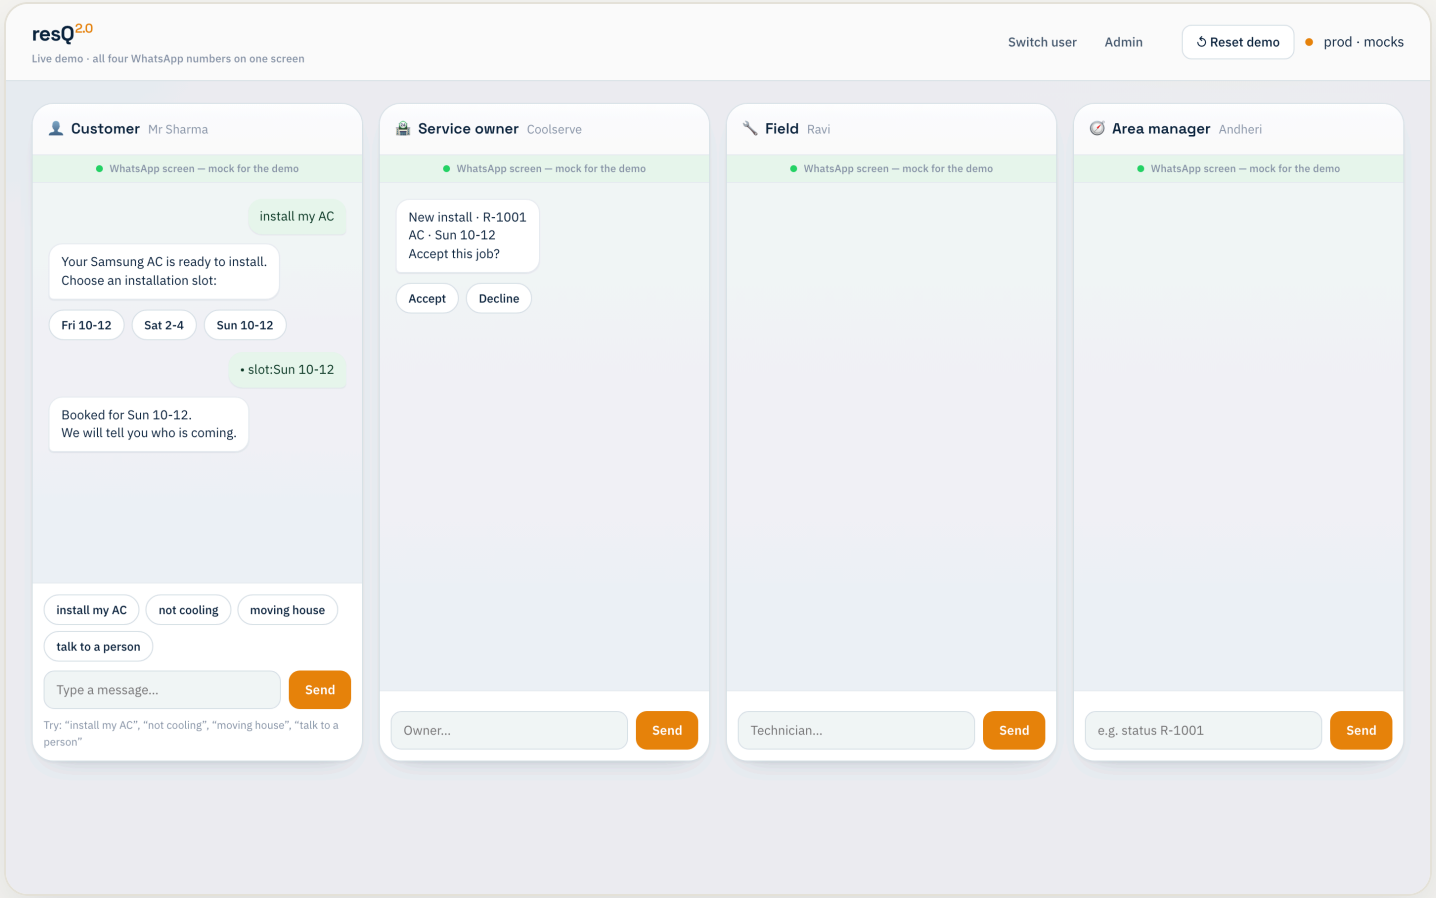

- Customer, owner, field and area each get their own WhatsApp number.
- The agent books, assigns, tracks and closes — in plain language (incl. Hindi).
- Every action is an append-only event: the ledger is the source of truth.
- When a human must step in, the desk takes over the thread — then hands back.

LIVE DEMO

Four phones, one engine, in real time

Install booked by the customer → offered to the owner → tracked by the area desk — all driven by the same event-sourced agent.

→ **Open /demo**

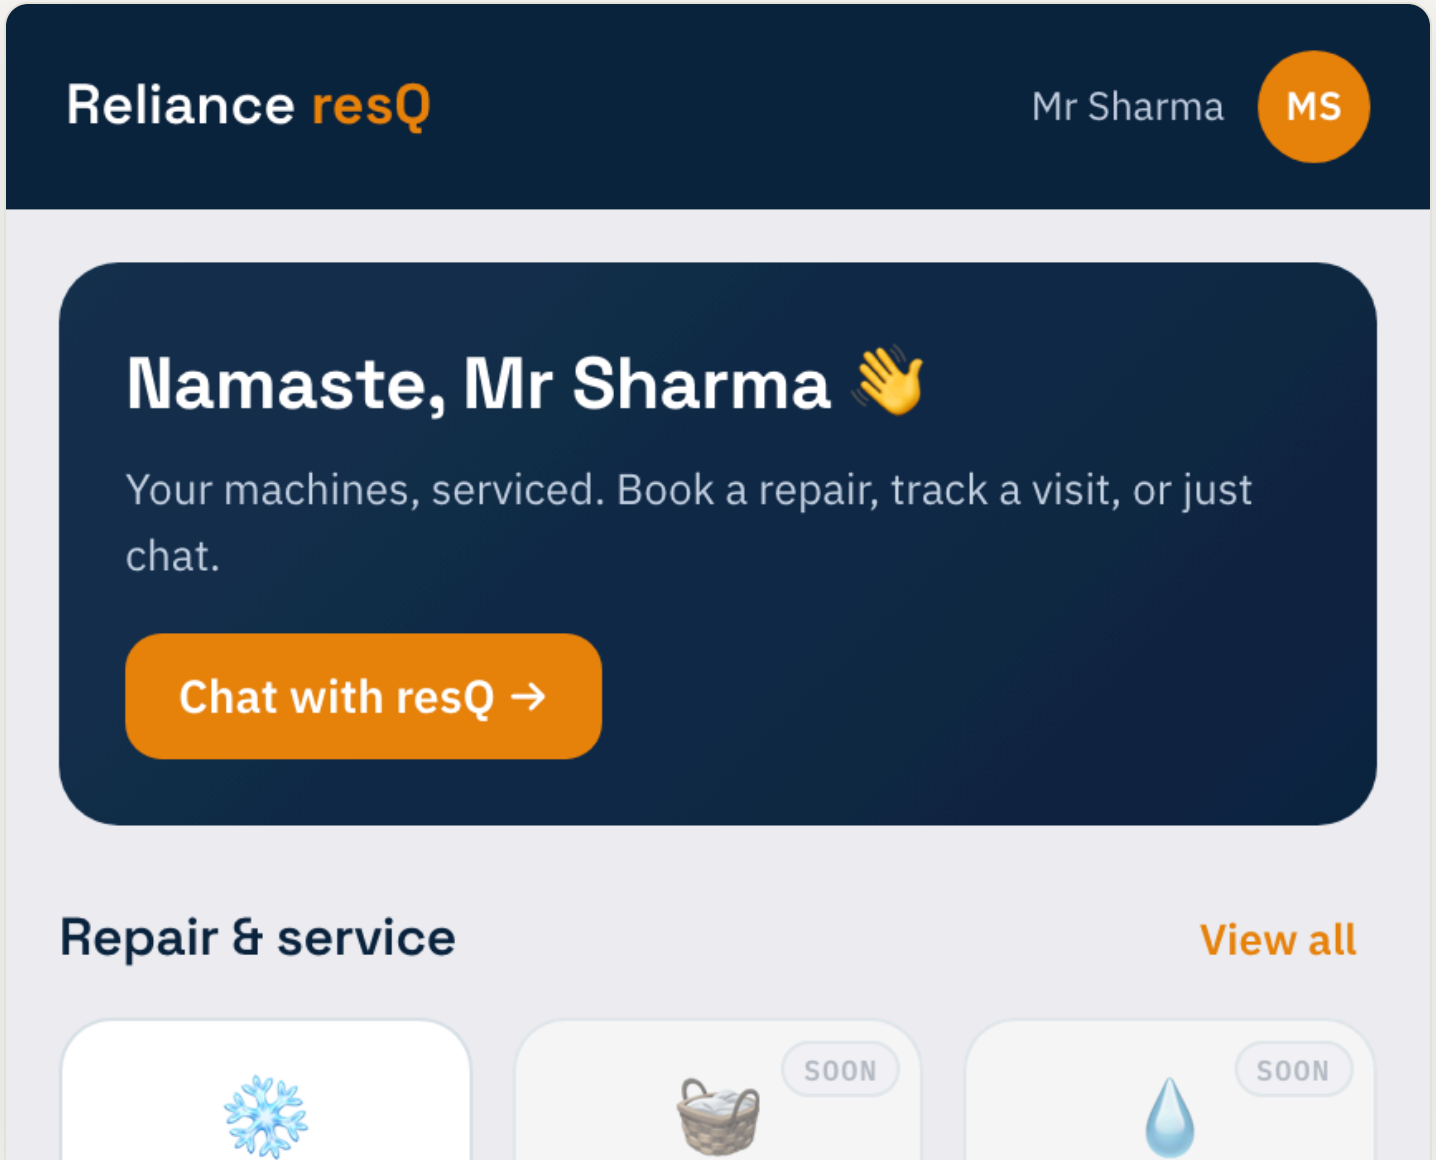

CUSTOMER EXPERIENCE

A branded app that falls back to chat

Repair & maintenance tiles open the WhatsApp thread and trigger the real journey intent. Photo, voice and Hindi all supported.

→ Open /customer

OPERATIONS

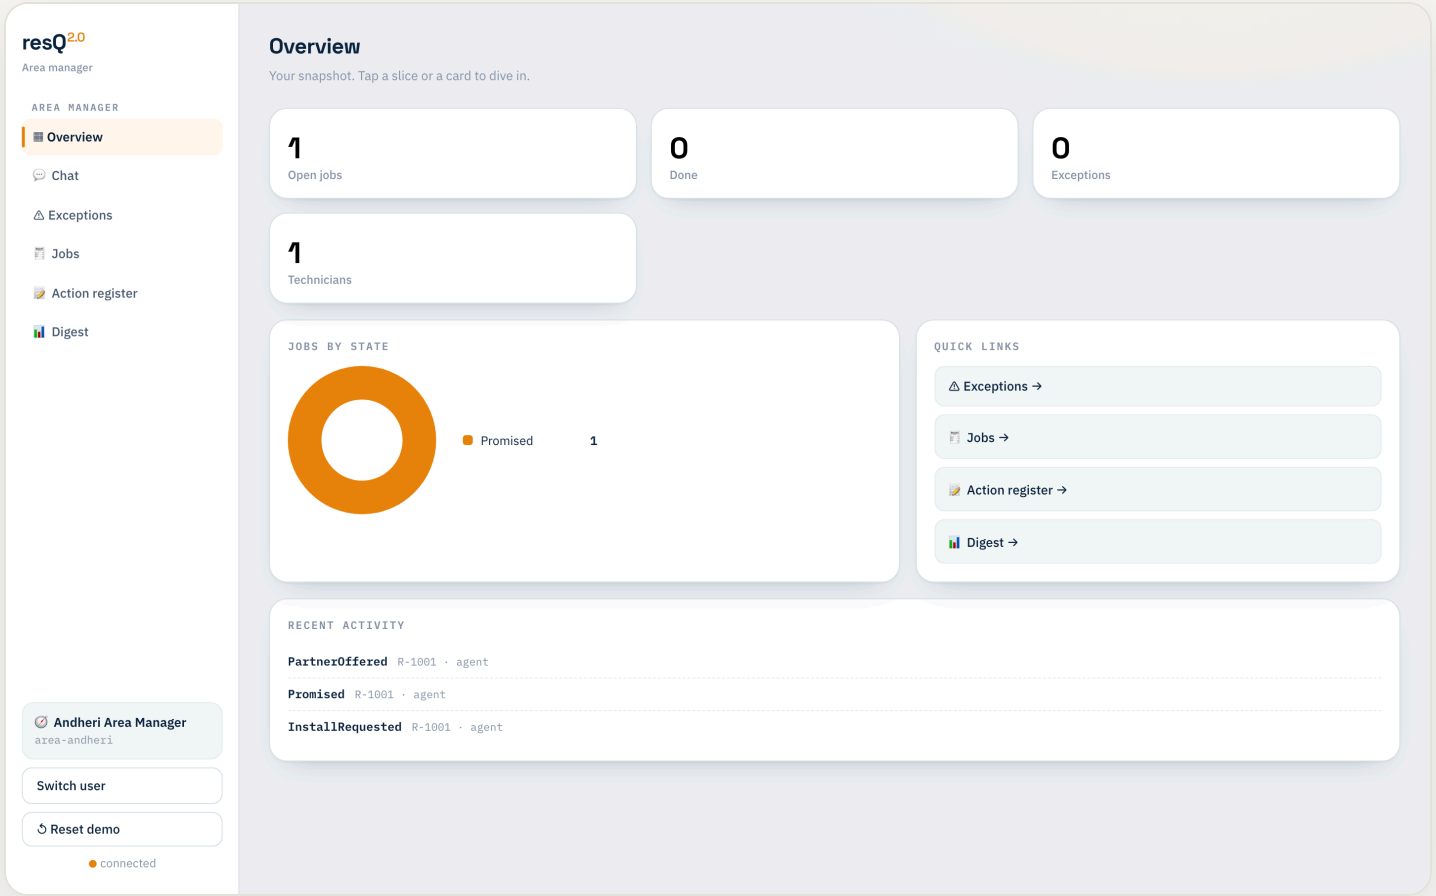

Role consoles for owner, field & area

Area managers act only on exceptions; everything else the agent handles. Live jobs-by-state, action register (accept/reject), digest.

→ /area

→ /owner

→ /field

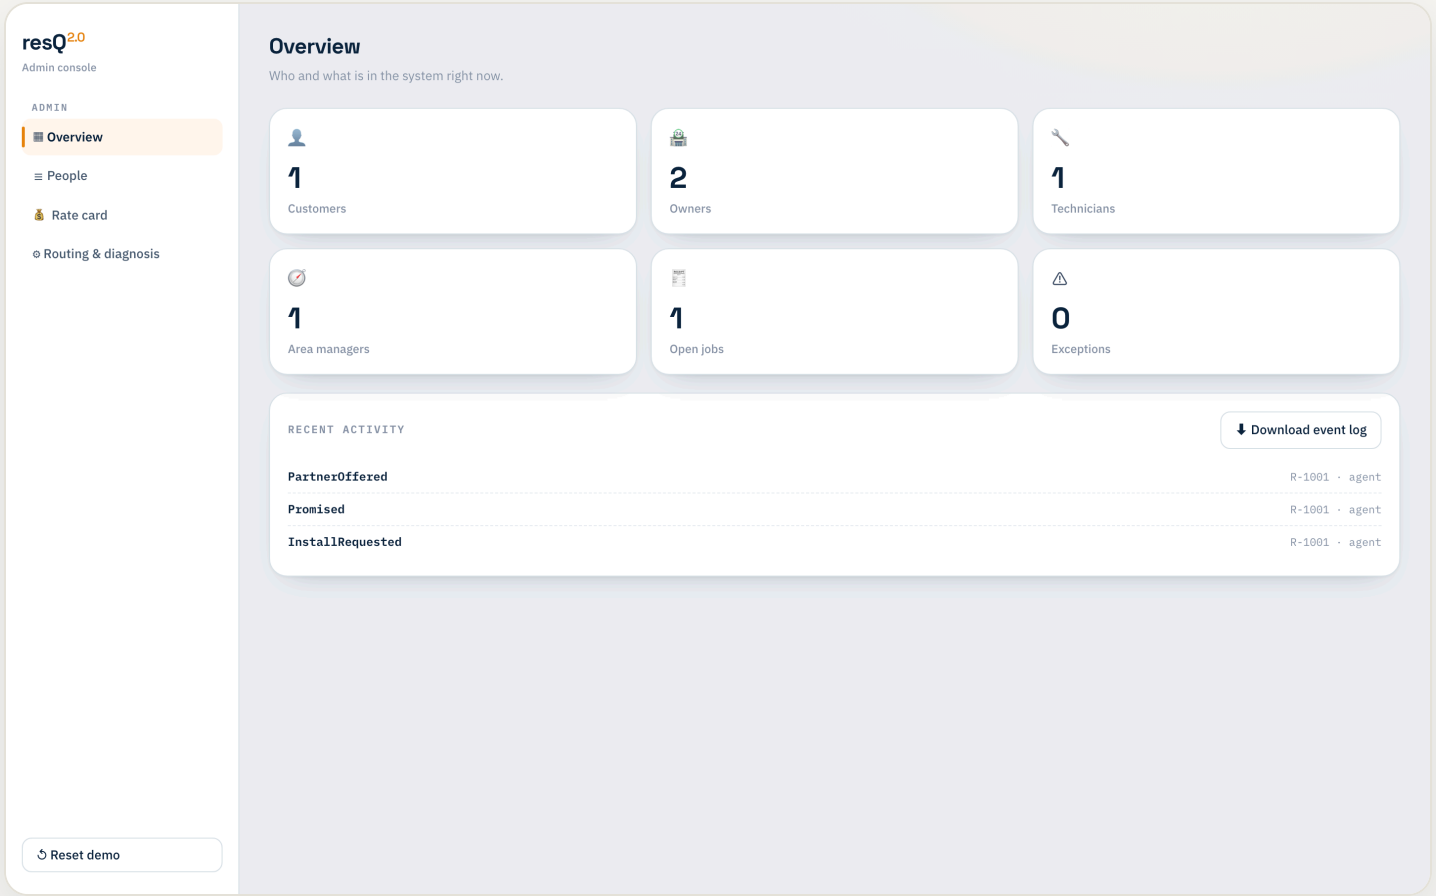

CONFIGURATION

No-code control of the agent

Onboard people, edit the rate card and routing/diagnosis as human-friendly tables — no deploy. Rules & SLAs stay hard-coded for safety.

→ Open /admin

COVERAGE

All thirteen journeys, end to end

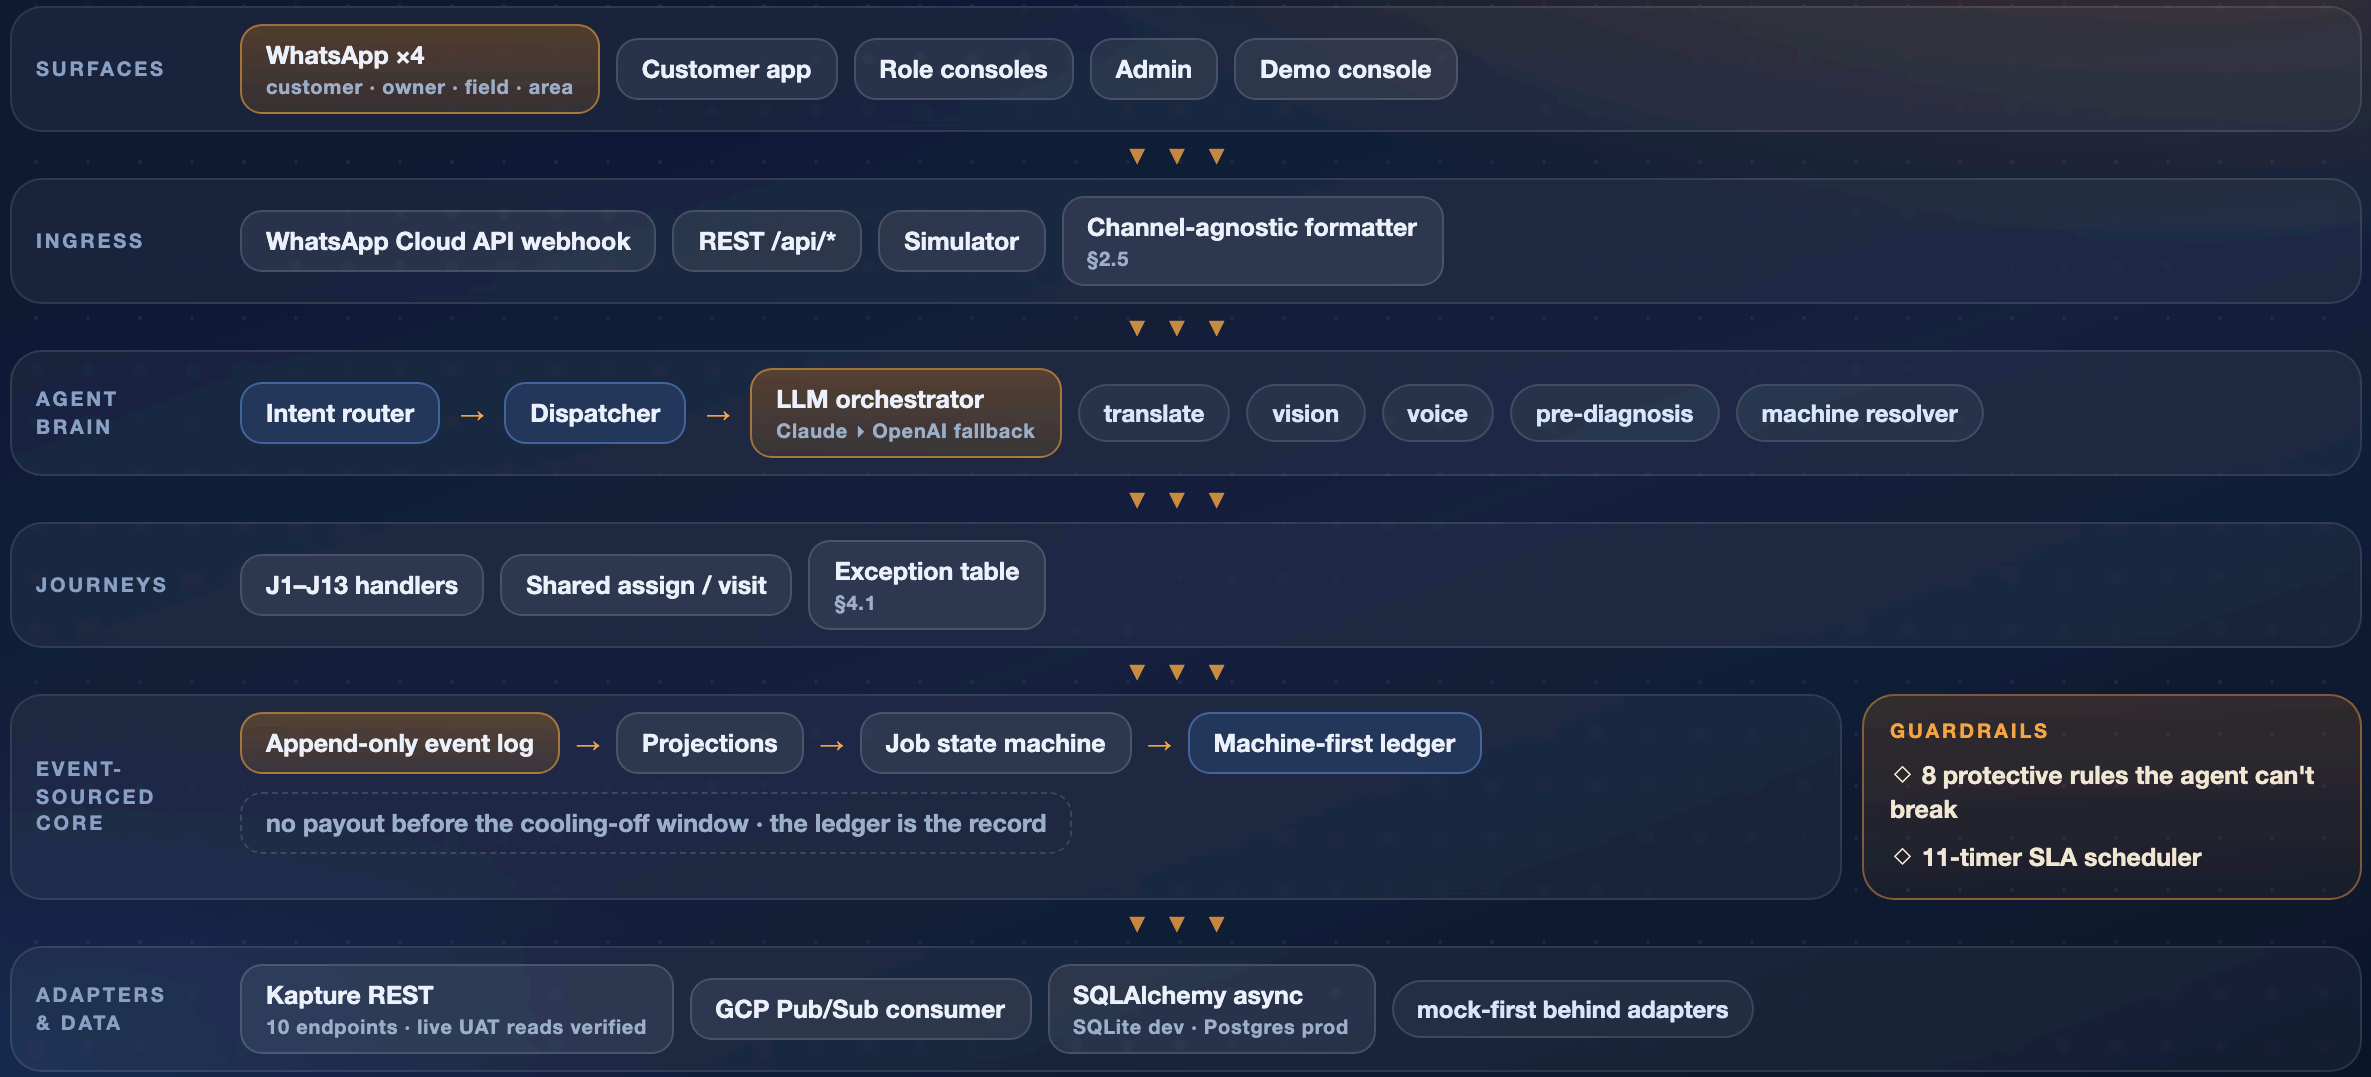

- J1 Install
- J2 Repair
- J3 Maintenance
- J4 AMC / plan
- J5 Reschedule
- J6 Spare part
- J7 Payment
- J8 Warranty
- J9 Relocation
- J10 Complaint
- J11 Feedback
- J12 Roster
- J13 Area ops

Plus shared assign/visit flows, the §4.1 exception table and an 11-timer scheduler.

UNDER THE HOOD

One agent, one source of truth

Event-sourced core · machine-first ledger · deterministic guardrails · provider-agnostic AI

Rules · prices · SLAs · event types — **deterministic, never AI-generated**

TRUST BY DESIGN

Eight protective rules the agent cannot break

- Technicians can never take cash in hand.
- No payout is released before the cooling-off window.
- Serial mismatch halts the job and alerts the desk.
- Every suggestion the agent makes is logged for accept/reject review.

Prices, SLAs, event types and the state machine are hard-coded — never AI-generated.

TRY IT YOURSELF

Every surface is live right now

Tap any link — the deployed app resets cleanly and runs the real engine.
